Tomás Rotta
University of Greenwich, London
THE OXFORD HANDBOOK OF KARL MARX

Edited by Matt Vidal, Tony Smith, Tomás Rotta, and Paul Prew

Karl Marx is one of the most influential writers in history. Despite repeated obituaries proclaiming the death of Marxism, in the 21st century Marx’s ideas and theories continue to guide vibrant research traditions in sociology, economics, political science, philosophy, history, anthropology, management, economic geography, ecology, literary criticism, and media studies.

Features

- Coverage is more comprehensive than previous volumes on Marx both in foundational concepts and in state-of-the-art empirical research on contemporary social problems
- The handbook is interdisciplinary, providing equal space to sociologists, economists, and political scientists, with substantial contributions from philosophers and historians
- Essays explore how Marxist theory is still effectively used in current research to understand the world around us

April 2019 (US) | June 2019 (UK)
$175.00 | $122.50 | £115.00 | £80.50
Hardcover | 9780190695545 | 864 pages

The **handbook website** is still under construction but you can already download all **41 chapters**:

The handbook will be available in **hardcover** and **e-book** formats:

Purpose, approach and contents of the Handbook
Purpose and approach (i)

• Part of series on major sociological theorists
  • Handbooks out on Weber and Bourdieu
  • Handbooks planned on Durkheim and others
• But we conceived this book as fundamentally interdisciplinary
• Accessible while engaging existing Marxist scholars with chapters that advance theory
Purpose and approach (ii)

More interdisciplinary than previous volumes on Marx

- Roughly equal space to sociologists, economists, political scientists & philosophers, with contributions from historians and geographers

More comprehensive than previous volumes on Marx

- Foundational concepts
- State-of-the-art research on topical themes and regions
Sections of the Handbook

1. Introduction
2. Foundations
3. Labour, Class & Social Divisions
4. Capitalist States & Spaces
5. Accumulation, Crisis & Class in the Core Countries
6. Accumulation, Crisis & Class in the Peripheral & Semi-Peripheral Countries
7. Alternatives to Capitalism
1. *Historical Materialism* - Paul Blackledge
2. *Class and Class Struggle* - Henry Heller
3. *Forces of Production and Relations of Production* - David Laibman
4. *Dialectics* - Bertell Ollman
5. *Ideology* - Jan Rehmann
6. *Value* - Geert Reuten
7. *Value and Class* - Alan Freeman
8. *Money* - Leda Maria Paulani
Foundations (ii)

1. *Capital* - Andrew Kliman
2. *Capital* - Patrick Murray
3. *Capital* - John Holloway
5. *Production & Distribution of Surplus Value* - Fred Moseley
7. *The Capitalist State* - Bob Jessop
8. *Capitalist Social Reproduction* - Martha E. Gimenez
9. *Technology* - Tony Smith
10. *Alienation* - Dan Swain
11. *Commodification of Knowledge & Information* - Tomás Rotta and Rodrigo Teixeira
Labour, Class & Social Divisions

1. *Unions* – Barry Eidlin
2. *Migration* – Nicholas de Genova
4. *Nationalism* – Kevin Anderson
5. *Hegemony* – Mark McNally
Capitalist States & Spaces

1. Crises & the State – Leo Panitch & Sam Gindin
2. The EU – Magnus Ryner
3. Urbanization – Erik Swyngedouw
Accumulation, Crisis & Class in the Core Countries

1. *Growth Stages & SSAs* - Terrence McDonough
2. *Stagnation and Crisis in Western Capitalism* - Matt Vidal
3. *The Capitalist World System* - Paul Prew
4. *Financialized Capitalism* - Jeff Powell
5. *Ecological Crisis* - Brett Clark, John Bellamy Foster & Stefano B. Longo
Accumulation, Crisis & Class in the Peripheral & Semi-Peripheral Countries

1. *Latin America* - Guido Starosta
2. *South Asia* - Debarshi Das
3. *China* – Lin Chun
4. *Middle East* - Gilbert Achcar
5. *Post-Soviet Russia* - David Mandel
Alternatives to Capitalism

1. Marx’s Concept of Socialism - Peter Hudis
2. Democratic Socialist Planning - Pat Devine
3. The Continuing Relevance of the Marxist Tradition for Transcending Capitalism - Erik Olin Wright
Relevance of Marx
Relevance of Marx

In 1963 two Economics PhD students at the MIT asked the following question to their teacher, Paul Samuelson

Paul Samuelson was the creator of the Neoclassical-Keynesian Synthesis and the first American economist to receive the “Nobel” prize

S. Hymer and S. Resnick:
“Prof. Samuelson, what is true in Marx that is not part of the MIT curriculum?”

P. Samuelson:
“Class”
Relevance of Marx

Marx is the Darwin of the social sciences

Marx praised capitalism but was its most profound critic

Marx is the product of capitalism, and its most radical self-criticism

Marxism will be relevant as long as capital dominates the production and distribution of wealth
Relevance of Marx

Marx theorized the *essences* and *appearances* of capitalism.

For Marx, economics was too fixated with appearances, ignoring the *inner logic* of accumulation.

Economics is the religion of capitalism.
Relevance of Marx

Many have claimed that Marxism died with:
  the end of the Soviet Union
  the fall of the Berlin wall
  the turn of China and India to global markets

But it is in fact the exact opposite of that

Marxist theory becomes more relevant after these events...

... because these events spread capitalism on a global scale never seen before
Globalization over 5 centuries (1500-2011)
Shown is the sum of world exports and imports as a share of world GDP (%)
The individual series are labeled with the source of the data

Increasing interest in Marx predates the 2007-8 financial crisis
Foundational Concepts
Foundational Concepts

People make history but not as they wish:

- people can make choices
- but people do **not** choose the **social conditions** under which they make choices

Which social conditions?
Humans live in **social formations**

**Social Formation** = particular combination of different **modes of production**, in which one mode of production is **dominant**

**Mode of Production** = social structure that regulates how humans produce, appropriate, and distribute wealth
Human history is the succession of different dominant modes of production.

Each mode of production can be theorized in terms of its technology and social institutions.

**Capitalism** = social formation in which the capitalist mode of production dominates.

In capitalism, capital tends to commodify everything.

Marx begins the analysis of capitalism via the commodity form.
Foundational Concepts

Marx’s entry point:
- not the individual as in Microeconomics
- neither economic aggregates as in Macroeconomics

Marx’s entry point:
- social form of wealth

Because the true social subject is not the individual, but capital itself

Workers and capitalists are both subordinated to the inner logic of capital
Foundational Concepts

**Wealth** = anything that is useful but requires labor to be produced

**Commodity** = products of human labor produced explicitly for exchange

**Value** = social form of human labor, when labor produces products for exchange

**Money** = value that appears as a thing

= value that autonomizes itself from the commodities that have value

**Capital** = self-valorizing value

**Economic crisis** = self-correcting mechanism of capital
In Marx’s work, there is a gradual progression from one category to the next:

Commodity (use-value vs. value)
Money
Surplus value
Capital
Productive vs. Unproductive activities
Capital accumulation
Interest-bearing capital
Rent-bearing capital
Fictitious capital
Foundational Concepts

In the “Foundations” section of the handbook we also have chapters on many other core concepts:

- Alienation
- Social estrangement
- Exploitation
- Historical materialism
- Dialectics
- Class
- Class struggle
- Ideology
- Fetishism
- Social reproduction
- Types of economics crises
- The State
Current Approaches in Marxist theory
Current Approaches

Marx was unable to finish his project

Some areas that he planned to cover before his death:

- Theory of the State
- Theory of international trade
- Theory of pre-capitalist modes of production

Our handbook covers some of these unfinished parts of Marx’s work
Current Approaches

Our handbook of Marx also covers new approaches within the Marxist tradition:

1. Why Neoclassical Microeconomics cannot provide micro-foundations for money but Marx can
2. How the behavior of the profit rate over the long run relates to the different institutional regimes of accumulation
3. How one social structure of accumulation (SSA) gives rise to a new SSA
4. Economic crises: surplus value shortage or excess?
5. Economic consequences of commodifying knowledge and information
6. The importance of interest and rents in the distribution of value
7. Whom does technology serve?
8. Is capital accumulation ecologically sustainable?
9. Why does capitalism financialize? Will capitalism de-financialize?
Current Approaches

Some **arguments** that you can find in our handbook
Current Approaches

Neoclassical economics has no micro-foundations for money

In Macroeconomics, money is everywhere
In Microeconomics, money is nowhere
There is no money in General Equilibrium models: all prices are relative prices

Today, Neoclassical Macro is basically applied Micro: “Micro-founded Macro”
But Micro has no theory of money
Neoclassical economics has no microfoundations of money

Micro: no money; all prices are relative prices; no absolute prices
Macro: money is introduced ad hoc; money is a medium of exchange
International Trade: money is an asset; UIP; CIP

L. Paulani:
General Equilibrium models cannot explain absolute prices consistently because they rely on a utility theory of value that is relativistic
Absolute utility has no meaning
Current Approaches

The profit rate can explain structural breaks in institutional regimes

Capitalism exists in different institutional regimes over time across countries

institutional regime ≈ social structure of accumulation ≈ regime of accumulation

T. McDonough:
In many cases, the behavior of the average profit rate over the long run can explain the:

- nature of an institutional regime
- transition between institutional regimes

An institutional regime is an attempt to solve “the problems” of the previous institutional regime

From a class perspective: “problems” to whom?
Current Approaches

The profit rate only falls over the long run under certain conditions

Marx drafted the “tendency of the profit rate to fall” (TPRF) over the long run because of technological change that replaces productive labor

Okishio’s theorem:
If the real wage is exogenous: technological change → profit rate rises
Because the gains from technology cutting costs go to profits

D. Basu:
TPRF depends on the behavior of real wages
TPRF depends on how the rate of exploitation responds to technological change
Commodified information has zero value

What determines the amount of value of any commodity is... not the socially necessary abstract labor time (SNALT) to produce it but the SNALT to re-produce it

Despite their great total costs of production any type of commodified information will have zero value

Movies, recorded music, processed data, software, books, papers, codified knowledge, chemical formulas, blueprints, ideas

T. Rotta and R. Teixeira:
Knowledge-commodities with zero value = valueless knowledge-commodities
Market price of information = knowledge-rent
Owners of knowledge = knowledge-lords
Paul Blackledge - “Historical Materialism”

Critiques of HM as reductive, mechanical, deterministic, teleological are caricatures

HM does not reduce everything to class or technology
  • But emphasises dialectical relation between forces & relations of prod

RoP do not mechanically and unidirectionally determine legal, political, and ideological forms
  • But frame material interests and thus shape the parameters of social struggles

Never meant to be a teleological theory of inevitable and unilinear progression of all societies through a small set of MoPs
  • But a map for understanding revolutionary politics
  • Human behavior constrained by these forces and relations, but humans remain the active agents of social change
Lin Chun - “Asia and the Shift in Marx’s Conception of Revolution and History”

HM is non-teleological, multilinear and open to unknown paths and unpredictable contingencies

Sustained attention to Asia → a “methodological breakthrough”

Originally theorized AMP: closed, self-sustaining village communities with the centralized state as the sole landlord
  • By 1859 Marx discarded the AMP concept
  • Untenable distinction between stagnant “Oriental despotism” versus progressive Occidental societies

Anticipated in colonial expansion the establishment of the world market

Indian Mutiny of 1857 as outcome of complex combination of religious, nationalist, cultural, and class politics
The golden age of western capitalism was historically unique; it is now in its geriatric stage of permanent stagnation and crisis.

Atlantic capitalism is a transnational accumulation regime.

Atlantic Fordism
- The Bretton Woods monetary system
- “Domestic” mass production with institutional supports for mass consumption
- The European Communities
- Western Europe (incl. UK) as a single market
  - Total imports 7.2% and exports 5.5% of GDP in 1962
Fordism offset the stagnationist and crisis tendencies

Declining profit rate
  • Decline in value of fixed capital and financial assets during the Great Depression and WWII

Rising organic composition of capital
  • Offset by a continuous rise in productivity generated by intensive growth

Underconsumptionism
  • Offset by rising real wages

Overproduction
  • Moderated through nationally-bound, oligopolistic competition
But only for so long ... 

Profit rate crisis in late 1960s
Overaccumulation crisis in early 1970s

The response

• Internationalization, financialization, and employment externalization

The geriatric stage of Atlantic capitalism

• Inherently slow growth, economic instability, and increasingly damaging economic crises
• Wage stagnation, rising inequality, and labor market precarity
• Political polarization
